

# ALL NATURAL CALORIE REDUCTION

## INTENSE CALORIE REDUCTION

We are experts in the application of Stevia. We have developed natural sweetener solutions for Food & Beverage to achieve desired calorie reductions, keeping excellent taste profiles.

## COST EFFECTIVE

The decision to reduce calories is not only a matter of taste, but also of keeping costs under control. Stevia One will develop the right natural solution for you, while generating considerable savings compared with your full sugar formula.

## KEEP YOUR TASTE

What makes our Stevia Sweetener Solutions perform better than any other in the market?

### 3 MAIN FACTORS:

#### Excellent quality and composition of our Stevia leaves:

Since many years, we conduct in-depth research in our Biolab, continuously aiming at improving our plant varieties and our leaf taste profiles.

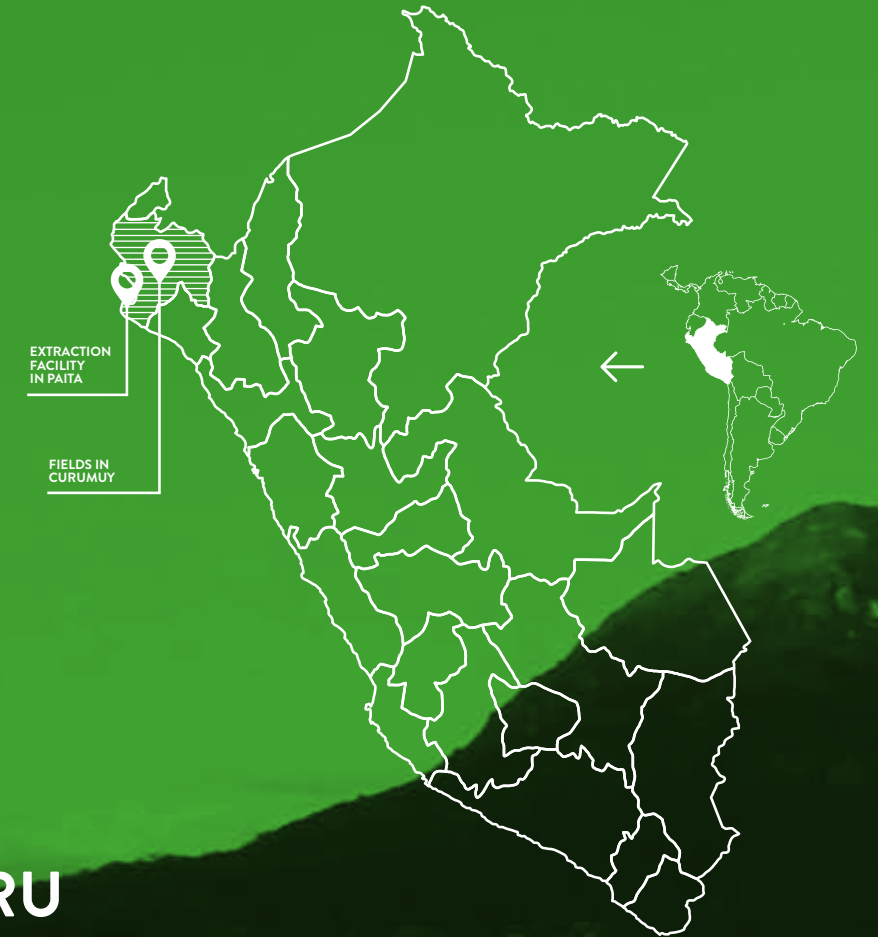

#### Our unique Water-Based Extraction process:

We use only water to extract the steviol glycosides from our leaves, resulting in high purity and a positive taste impact in our final product.

#### Customized Product Development

Our Sweetener Technologists are at your service to develop tailor-made Stevia Sweetener Solutions for your applications, targeting the calorie reduction you aim for.

# FROM PERU TO THE WORLD

## PURE PERU

The fertile lands of South America are Stevia's original and natural habitat, where at the end of the 19th century Swiss botanist Mosé Giacomo Bertoni discovered & classified Stevia rebaudiana. A plant used for more than 1500 years by the Guaraní people of Brazil and Paraguay to sweeten the local tea, as medicine and as a sweet treat.

Our research concluded that vast extensions of land in the Peruvian Coast are the ideal agricultural locations where Stevia can grow extensively. Our extraction facility is located in Paita, near one of the most important ports in Peru.

# SWEETNESS IN ALL ITS PURITY

## PURE & NATURAL PROCESS

### SOLVENT FREE, JUST PLAIN WATER

In Stevia One, we extract the steviol glycosides from the leaves without using solvents. Our unique chromatographic Water-Based Extraction process only uses water.

We are committed to utilize a natural process, that's why our Stevia is extracted without alterations of any kind. We extract the Stevia with one of the most innovative technologies currently available. The result is our amazing natural Stevia extract.

## TRACEABLE & RELIABLE

### FROM THE SEEDS TO THE FINAL PRODUCT

#### TRACEABLE

We identify, document and track every stage of the production of our Stevia. We are truly vertically integrated. We are able to track and trace every batch of Stevia that we produce.

#### RELIABLE

We are focused on Quality throughout the whole production process. Our strategic location in Peru guarantees year-round harvest capacity in our fields and expansion capacity in our industrial facilities. That makes Stevia One scalable, predictable, reliable and guaranteeing a high-quality natural sweetener.

## SUSTAINABLE

### RAINFOREST ALLIANCE CERTIFICATION

We proudly offer the first and currently only Stevia products to carry the Rainforest Alliance Certified seal. We help to conserve the water, soil and the ecosystem. We take special care of our environment; our workers are fairly treated and the local communities benefit.

To earn the Rainforest Alliance Certified seal, farms are required to meet comprehensive standards for environmental, social and economic sustainability.
